

Appendices

All appendices referenced in the Community Health Needs Assessment (CHNA) report are included below and are also available online at Inova.org.

Appendix A: Community engagement

Summary of community outreach and engagement efforts

Appendix B: Community description

Detailed maps and tables exploring resident demographics and characteristics

Appendix C: Community conversations

Topics discussed during community conversations

Appendix D: Community survey

Communitywide survey results broken down by demographics

Appendix E: Community health status assessment results

Chart of health indicators used to identify disparities, trends and progress towards benchmarks

Appendix F: Top health issues methodology

Description of process and outcomes

Appendix G: Actions taken since the previous CHNA

Appendix A: Community engagement

The Mount Vernon CHNA gathered community input through two main methods – community conversations and a community survey. Community conversations bring together individuals who represent a diverse range of local community voices and champions. Participants included individuals with special knowledge of or expertise in public health; local public health departments; agencies with current data or information about the health and social needs of the community; representatives of social service organizations; business leaders and representatives; leaders and members of medically underserved, low-income and minority populations. Inova team members conducted community conversations with representatives from the Mount Vernon action committee, the Partnership for a Healthier Fairfax steering committee, local health departments, regional community health workers, the local federally qualified health center and a group of faith leaders from around the region.

The community survey was promoted to partners and residents. The survey was available in print and online in ten languages: Amharic, Arabic, Chinese (Mandarin), Dari, English, Farsi, Korean, Spanish, Vietnamese and Urdu. Printed copies were provided to partners and local clinics, as well as health department facilities. Community health workers assisted in the collection of print and electronic survey responses in their local communities.

Appendix B: Community description

This section identifies and describes the community that was assessed by Inova Mount Vernon Hospital and Inova Ambulatory Surgery Center at Lorton (hereafter referred to as the Inova Mount Vernon Hospital community). The community was defined by considering the geographic origins of the hospital's inpatient discharges and emergency department visits.

The Inova Mount Vernon Hospital community is comprised of 55 ZIP codes in Alexandria and Fairfax cities and Arlington, Fairfax and Prince William counties. For the purposes of the CHNA assessments, the Emergency Departments' service area (ZIP codes accounting for 75% of visits) in Virginia was used to better represent the neighborhoods served by the hospital and surgery center.

Age

Population characteristics and changes directly influence community health needs. The total population of the Inova Mount Vernon Hospital community is expected to grow by more than 8% from 2025-2035. In that same time frame, the population 65+ is expected to increase by nearly 40%. The growth of older populations is likely to lead to a growing need for health services, since on an overall per-capita basis, older individuals typically need and use more services than younger persons.

Figure B4. Percent change in population by age, Inova Mount Vernon Hospital community (2025-2035)

		Total Population			Change
Age Cohort	2025	2030	2035	5 year 2025-2030	10 year 2025-2035
0-17	363,159	366,634	369,668	0.96%	1.79%

Race and ethnicity

In Fairfax County in 2023 Asians, Hispanics and African Americans represented 19.9%, 17.4% and 9.8% of the county's population, respectively. Nearly one-quarter of the state's Hispanic population resides in Fairfax County (U.S. Census Bureau). Racial and ethnic diversity is increasing, as these groups are growing and the percent of the population that is White/Caucasian (excluding Hispanics and Latinos) is decreasing. Additionally, there are portions of the community with high percentages of residents who are foreign-born as well as households with limited English proficiency.

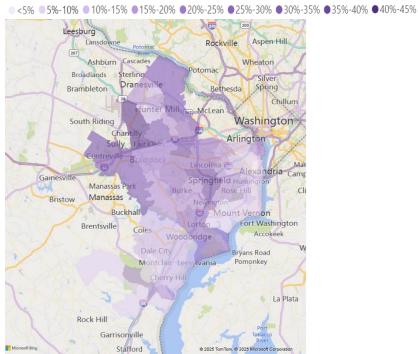

Figure B8d. Percent of population Foreign-Born, Inova Mount Vernon Hospital community

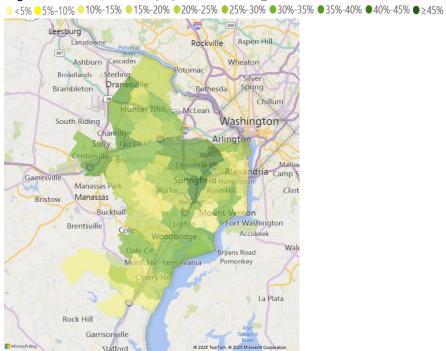

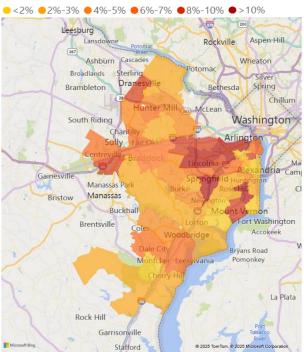

Figure B8e. Percent of limited English-speaking households, Inova Mount Vernon Hospital community

Education

Overall, the Inova Mount Vernon Hospital community is highly educated. In Fairfax County, 64.3% of residents 25 years and over hold a bachelor's degree or higher, with about one third of residents holding a graduate or professional degree. However, there are noticeable discrepancies within the County.

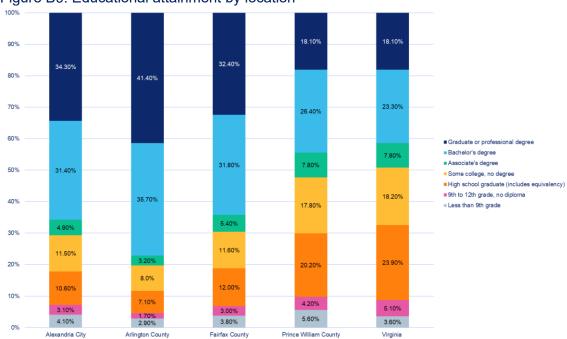

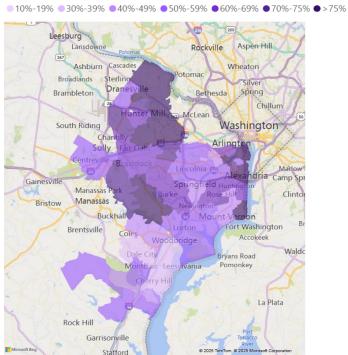

Figure B9. Educational attainment by location

Figure B10. Percent of residents age 25+ with bachelor's degree or higher, Inova Mount Vernon Hospital community

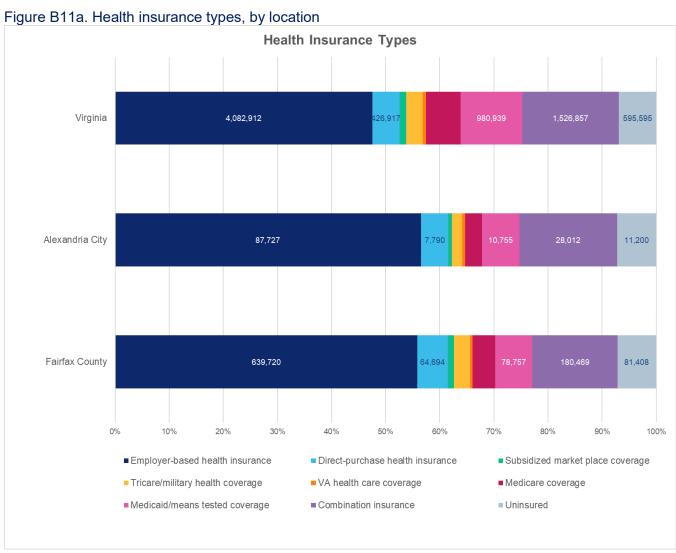

Health insurance

Prior to 2019 in Virginia, Medicaid was primarily available to children in low-income families, pregnant women, low-income elderly persons, individuals with disabilities and parents who met specific income thresholds. Adults without children or disabilities were ineligible.

In January 2019 Virginia expanded Medicaid eligibility to make healthcare more accessible for these populations. According to the Department of Medical Assistance Services, over 360,000 Northern Virginian's are enrolled in Medicaid in 2025.

Figure B11b. Percent of the population without health insurance, by location

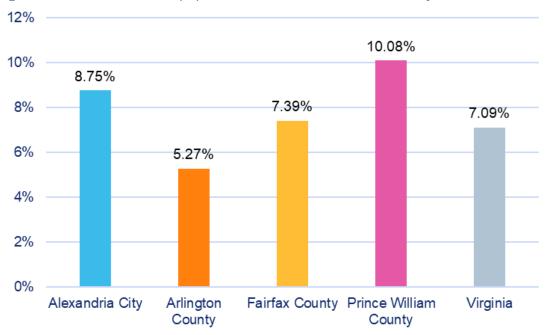

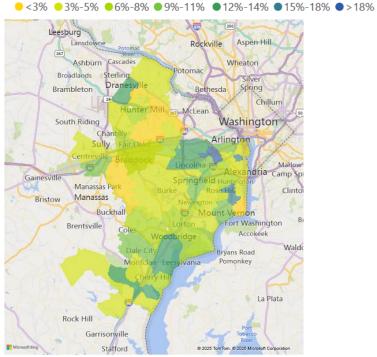

Figure B12. Percent of residents without health insurance coverage, Inova Mount Vernon Hospital community

Socioeconomic

Many health needs have been associated with poverty, unemployment and other socioeconomic factors. While most socioeconomic indicators in the Inova Mount Vernon Hospital community are favorable compared to Virginia overall, there are disparities by race/ethnicity, county/city and even census tract.

Measure	Alexandria City	Fairfax County	Virginia	U.S.
Population 25+ without High School Diploma	7.2%	6.8%	8.7%	10.6%
Population with a Disability	7.2%	7.8%	12.2%	13.0%

Figure B24. Percent of residents with a disability, Inova Mount Vernon Hospital community

Food deserts

Food deserts are defined as low-income areas more than one mile from a supermarket in urban areas or more than ten miles from a supermarket in rural areas. Areas shaded in green are designated food deserts.

Source: U.S. Department of Agriculture

Accessed: July 29, 2025

Medically underserved populations

Medically Underserved Populations (MUPs) are designated by the Health Resources and Services Administration (HRSA). Populations receiving MUP designation include groups within a geographic area with economic, cultural or linguistic barriers to health care. There are multiple census tracts within the region that have been designated as areas where Medically Underserved Populations are present. In the Inova Mount Vernon Hospital Community, this area falls primarily in Mount Vernon, Woodbridge and Arlandria.

Resources

Federally Qualified Health Centers (FQHCs) are established to promote access to care in areas designated as "medically underserved." These clinics receive enhanced reimbursement for Medicaid and Medicare services and most also receive federal grant funds under Section 330 of the Public Health Service Act. There currently are three FQHC organizations operating multiple sites in Northern Virginia.

In addition to the FQHCs, there are other clinics in the area that serve lower-income individuals. These include the Arlington Free Clinic (Arlington, VA), the Loudoun Free Clinic (Leesburg, VA), Culmore Clinic (Falls Church, VA) and multiple sites throughout the region of the George Mason University's Mason and Partners Clinics.

In addition to these resources, Inova operates several Inova Cares Clinic sites across Northern Virginia. The local health departments also provide an array of services at locations throughout their jurisdictions.

Other community resources

There is a wide range of agencies, coalitions and organizations that serve the Mount Vernon region.

Several organizations maintain large databases to help refer individuals in need to health and human services and resources to address social drivers of health. Resources available include:

Housing and utilities	Tax preparation assistance
Food, clothing and household items	Legal, consumer and financial management services
Food programs	Transportation
Health care and disability services	Employment and income support
Health insurance and expense assistance	Family support and parenting
Mental health and counseling	Disaster services
Substance abuse and other addictions resources	Government and community services
Support groups	Education, recreation and the arts

Appendix C: Community conversations

The Mount Vernon Community Action Committee, along with several other individuals, representatives and groups, participated in community conversations regarding the health of the community and opportunities to improve it. Data and findings from the previous CHNA were presented, and the participants were asked to share whether those data continue to feel relevant to the health of their community and what other factors are impacting health.

Figures C1 through C6 are a summary of their responses, organized by:

- 1. Categories: What health issues are impacted
- 2. Factors: What factors are affecting health in the community
- 3. Threats: What are the challenges posed
- 4. Opportunities: What are the opportunities presented

Figure C1. Mount Vernon Community Action Committee

Category	Factor	Threats posed	Opportunities created
Chronic conditions	Diabetes and cancer disproportionately affect Black residents in Fairfax County	 Lack of culturally relevant prevention and education Delayed detection and poor outcomes 	 Expand chronic disease education and outreach programs Community-led education and cooking demonstrations
Economic stability	Cost of basic needs, like groceries, increasing Transportation and geographic constraints limit access to affordable food	 Reduced ability to maintain healthy diets Increased financial stress Reduced participation in programs 	 Promote geographically accessible food programs Incentivize youth participation in food education Improve promotion and accessibility of local resources
Education & health literacy	 Lack of health education and prevention programs Mistrust in surveys and systemic approaches 	Missed opportunities for engagement and behavior change	Casual, community-led health education formats
Healthcare access	 Lack of access to specialty care (e.g. colonoscopies) Doctors have limited time to educate patients 	Poor patient understanding and delayed care	More educational programs to supplement clinical visits
Immunizations and infectious disease	Vaccine hesitancy in minority communities	Decline in flu vaccine uptake and trust	Trusted messengers, beyond healthcare, to improve vaccine uptake
Maternal, youth & child health	 Youth living in vulnerable conditions (housing, finance) and lack basic resources 	Limited ability to apply healthy habitsMissed engagement opportunities	 Host youth-friendly, low-barrier programs Youth can help to engage parents and communities
Mental health and substance use	 Mental health worsening due to cultural climate and systemic barriers Lack of support groups and low-barrier access 	Increased isolation and reluctance to seek care	 Create affinity groups and online support spaces Reframe education as communal and casual

Figure C2. Partnership for a Healthier Fairfax

Category	Factor	Threats posed	Opportunities created
Economic stability	 Affordability of basic needs (i.e. food) High cost of living Threats to support services for those who depend on them for financial and basic needs 	 Poor nutrition and inability to obtain nutritious foods Worsened health due to stress (mental, physical) 	 Strengthen public-private partnerships Financial literacy and budgeting workshops Support of local food initiatives
Education & health literacy	 Disinformation and misinformation Fear of data sharing between institutions Complicated system navigation 	 Trust in institutions broken Increased rates of diseases and threats to health Missed care and social support opportunities 	 Large organizations and trusted community partners to educate and promote accurate messaging Use of trusted messengers Translation and education for system navigation Use of CHWs and doulas
Healthcare access	 Changing policies and uncertainty Challenges to navigate health system (immigrants, older adults) Lack of culturally sensitive and community-based education for providers 	Improper and delayed care Gaps in crucial access (follow up appointments, referrals)	 Advocacy and partnerships between local organizations and large systems Educating providers as resource conduits
Mental health and substance use	Polarization in society affecting mental wellbeing	Social isolation and fewer social connections	Community based support groups
Neighborhood, community & environment	Mistrust and hesitancy	 Lower attendance rates at events and adherence to medical guidance Increased spread of communicable diseases 	Use trusted professionals to streamline delivery of accurate information

Figure C3. Fairfax County Health Department

Category	Factor	Threats posed	Opportunities created
Chronic conditions	Increasing rates of chronic conditions	Increase in manageable and preventable diseases	Community wide screening initiativesExplore funding and partnership opportunities
Economic stability	Workforce shortagesAffordability of housingHigh cost of medications	Financial insecurity and stress can contribute to mental health issues	 Workforce development initiatives and program partnerships
Healthcare access	 Barriers (culturally accessible care, complex processes) Gaps in specialty care – available services do not meet demands 	Missed or delayed care Increase in chronic conditions	 Simplify application processes (financial aid) Take advantage of holiday and back to school events to connect community members to resources
Immunizations and infectious disease	 Increase in healthcare acquired infections Decline in vaccine acceptance for preventable illnesses 	Increase in preventable diseases like measles	 Vaccination clinics in the community and expansion of vaccines in emergency departments Optimize messaging during outbreaks to remind people of the importance
Injury & violence	 More to be done about preventing injuries Distracted driving (texting, alcohol) 	Motor vehicle related injuries and deaths Injury and death of healthy individuals	 Collaboration with public safety and policy makers on public health safety initiatives Partner with trauma doctors/surgeons and other professionals on safety and educational campaigns
Maternal, youth & child health	 A need for post-partum care outside of an OBGYN New moms often do not prioritize themselves Youth mental health challenges 	 Losing people to care after their coverage for certain services ends Maternal mortality and morbidity 	 Intentional outreach and referrals for pregnant women without a permanent medical home Educational and motivational workshops for new moms (medical care and self-care)

Figure C4. Neighborhood Health of Northern Virginia, Federally Qualified Health Center

Category	Factor	Threats posed	Opportunities created
Chronic conditions	 Chronic diseases remain persistent, especially among low-income communities Cancer diagnoses increasing due to delayed care 	Worsened outcomes from lack of regular monitoring and delayed detection	 Improved screening coordination across healthcare system Strengthen primary care infrastructure
Economic stability	High cost of living and affordability challenges	Reduced access to care and basic needs	Strategic community collaboration to prioritize resources
Healthcare access	 Uninsured individuals face major barriers to care despite a robust safety net system Specialty care and radiology/testing demand exceeds supply (OBGYN services and surgeries, dental) 	 Long wait times and unmet needs Gaps in coverage and service availability Delays in specialized procedures, even for insured patients 	 Broadened offerings from some providers (e.g. Inova) Robust safety net system with room to grow
Mental health and substance use	 Youth mental health demand is high Pipeline issues in recruiting bilingual mental health professionals 	Burnout and staff turnover	Community workforce initiatives to recruit MH professionals

Figure C5: Community health workers, all regions

Category	Factor	Threats posed	Opportunities created
Economic stability	 Transportation costs Food insecurity Medicaid eligibility concerns Financial stability for older adults 	 Avoidance of emergency services Economic strain among older adults Trade-offs between basic needs 	Education on benefitsVirtual resource sharingSupport for older adults
Education & health literacy	 Ineffective methods of communication Lack of awareness of services and insurance navigation Difficulty asking questions 	 Poor understanding of health systems Inability to choose appropriate coverage and communicate needs Avoidance of resources Missed care opportunities 	 Multilingual outreach CHW and insurance navigator pairing Community education efforts Normalize health conversations and address fact vs. fiction to break down stigma
Healthcare access	Lack of culturally accessible materials Lack of bilingual staff Unmet oral health, specialty care and sexual/reproductive health needs Difficulty navigating systems Need for CHWs and navigators	Delayed treatment and unmanaged conditions Fear of accessing services Ineligibility for care Limited access to specialists Increased transmission risks	Culturally competent care Tech-assisted interpretation Expanded health services and coverage Recruit bilingual professionals and volunteers
Mental health & substance use	Rising anxiety Cultural stigma Isolation Lack of safe spaces for older adults	Hesitancy to seek help Unspoken mental health issues No outlet for older adults	Community trust-building Mental health education Safe spaces for older adults
Neighborhood, community, environment	 Lack of cross-sector collaboration Faith and culturally based barriers to partake in resources Fear, mistrust and hesitancy in support services 	 Reduced engagement in community events and social attendance Missed opportunities for education and support 	Community ambassadors Holistic outreach Leverage partnerships with faith-based groups

Figure C6: Faith partners, all regions

Category	Factor	Threats posed	Opportunities created
Economic stability	 Financial insecurity and strain Increase in single-income homes Workforce changes and losses Housing insecurity 	 Trade-offs between basic needs Inability to access resources due to financial insecurity Older adults and marginalized communities at risk of being unhoused 	 Increased rental and utility assistance through community resources Advocacy for living wages and stable housing
Healthcare access	 Lack of providers and long wait times Gaps in services (dental, mental health) Lack of awareness of existing services 	 Delayed treatment and unmanaged conditions Lack of engagement with formal services 	 Lean on church support services as an entry point to care Equipping trusted community pillars with the right knowledge and resources
Maternal, youth & child health	Teen vulnerability Insufficient resources for children and teens with disabilities	Unmet needs in children and youth Pressure on youth to contribute financially and become adults earlier	 Resource sharing among and with families Advocacy for whole-family support Church-school partnerships
Mental health & substance use	 Rising anxiety Cultural stigma Misinformation and spiritualization of mental health issues 	 Increased mental health issues Criminalization of untreated mental illnesses Increased risk for marginalized communities to become involved with the criminal justice system Hesitancy to seek help Isolation for older adults 	 Acute and early access interventions Utilizing trusted environments for outreach Safe spaces for open conversations
Neighborhood, community & environment	Lack of safe, stigma-free spaces for teens	 Reduced engagement due to fear and stigma Limited youth engagement opportunities and safe social places 	Utilizing faith spaces as hubs for connection and education
Obesity, nutrition and physical activity	Physical activity recommendations unrealistic due to life priorities	Reduced ability to engage in healthy choices	Address social drivers of health before lifestyle changes can be addressed and suggested

Appendix D: Community survey

Data for the community survey were collected through a tool (Figure D1) that asked participants for details about themselves, such as gender, race, income and ZIP code and their opinion about three main questions:

- What are the greatest strengths of our community?
- What are the most important health issues for our community?
- What would most improve the quality of life for our community?

Survey participants could select up to three choices for each question and leave open feedback in a freeform field. The survey was made available online and in paper format and was in the field from January through March 2025. Surveys were available in Arabic, Amharic, Chinese (Mandarin), Dari, English, Farsi, Korean, Spanish, Urdu and Vietnamese. This survey utilized a convenience sampling method; therefore, results from this survey are not generalizable to the entire community.

Because Alexandria and Prince William health departments were conducting community health assessments at the same time as this CHNA, the three surveys were coordinated such that data could be combined. Inova focused its survey collection on Fairfax and Loudoun counties while Alexandria City and Prince William County health departments surveyed their communities. Survey respondents provided their ZIP code which allowed responses from the Inova Mount Vernon Hospital community to be included and others to be excluded from the analysis.

Themes were identified in the survey in two ways. First, the overall results were reviewed; a survey response was considered a theme if it was in the top 5 of all responses (as shown in the CHNA Report). Second, the results were analyzed by respondent demographics to identify disparities and different perspectives. In this case, a survey response was considered a theme if it fell in the top five for that group.

Figure D1. Community survey

Northern Virginia Community Health Survey

Inova and our partners are conducting a short, anonymous survey to learn about what is important to people in Northern Virginia. The results will be used to inform ongoing efforts to make this a healthier community.

Northern Virginia. The results will be used to inform ong	oing efforts to make this a healthier community.
This survey is part of a larger health assessment that in of our communities. If you need more information, pleas CHNA@inova.org or call 703-698-2575.	
1. In your opinion, what are the greatest strengths of	our community?
Please select up to THREE (3) boxes below. ☐ Access to healthy food ☐ Safe and affordable housing ☐ Services that support basic needs (food, clothing, diapers, temporary cash assistance) ☐ Educational opportunities (schools, libraries, vocational programs, universities) ☐ Jobs and a healthier economy ☐ Transportation options ☐ Access to healthcare and public health services ☐ Access to vaccines ☐ Mental health and substance use services ☐ Public safety (law enforcement, fire, rescue services)	 □ Inclusive access for people with disabilities (hearing, vision, intellectual, physical) □ Clean, safe and healthy environment (clean air, stable climate, sanitation) □ Opportunities to be involved in the community (volunteerism, arts and cultural events) □ Welcoming diversity (social, cultural, faith, economic) and addressing racism and biases □ Access to parks, recreation, walkable/bikeable neighborhoods □ Access to accurate sources of health information □ Other (please specify):
2. In your opinion, what are the biggest health issues Please select up to THREE (3) boxes below.	in our community?
 □ Aging-related health concerns (dementia, arthritis) □ Chronic health conditions (cancer, diabetes, heart disease, stroke, asthma) □ Illnesses spread by insects and/or animals (Lyme West Nile, malaria, Zika, rabies) □ Illnesses that spread from person to person (flu, COVID-19, TB, Mpox, measles, HIV, STDs/STIs,) □ Preventable injuries (car/bike crashes, falls, poisoning) □ Violence and crime in the community □ Domestic violence, rape/sexual assault, child abuse □ Dental problems and access to dental care □ Maternal, infant, child, youth and teen health 	 Mis/Disinformation about health issues □ Tobacco use (cigarettes, vaping, e-cigarettes, snuff, chewing tobacco) □ Alcohol, drug, and/or opiate abuse (including overdose) □ Mental health (depression, anxiety, stress, self-harm) □ Obesity □ Food and water quality and safety □ Differences in life expectancy and health outcomes based on race, ethnicity, and economic well-being □ Other (please specify):
3. In your opinion, what would most improve health in	our community?
Please select up to THREE (3) boxes below ☐ Access to healthy food ☐ Safe and affordable housing ☐ Support for basic needs (food, clothing, diapers, temporary cash assistance) ☐ Educational opportunities (schools, libraries, vocational programs, universities) ☐ Jobs and a healthier economy ☐ Transportation options ☐ Access to healthcare and public health services ☐ Access to vaccines ☐ Mental health and substance use services ☐ Public safety (law enforcement, fire, rescue services)	 □ Inclusive access for people with disabilities (hearing, vision, intellectual, physical) □ Clean, safe and healthy environment (clean air, stable climate, sanitation) □ Opportunities to be involved in the community (volunteerism, arts and cultural events) □ Welcoming diversity (social, cultural, faith, economic) and addressing racism and biases □ Access to parks, recreation, walkable/bikeable neighborhoods □ Access to accurate sources of health information □ Other (please specify):

Please answer the following questions.

We ask a few questions about you so we can understand more about who took this survey.

Thank you for participating in this anonymous survey!

4. What is your AGE?	9. Where do you USUALLY GET HEALTHCARE?
Please write in:	Select ALL THAT APPLY: ☐ Hospital / emergency room
	□ Doctor's office
5. What is your HOME ZIP CODE?	 □ Urgent care center □ Free or reduced-fee clinic
Please write in:	□ Veterans Administration
	Other healthcare setting:
6. What is your ANNUAL HOUSEHOLD INCOME?	 ☐ I don't get healthcare ☐ Prefer not to say
Please choose ONE (1) box: ☐ Less than \$25,000	
□ \$25,000 - \$49,999	10. What COUNTRY were you born in?
□ \$50,000 - \$99,999 □ \$400,000 \$424,000	Please write in:
□ \$100,000 - \$124,999 □ \$125,000 - \$199,999	
□ \$200,000+ □ Prefer not to say	11. What is your FIRST/PRIMARY LANGUAGE?
2 1100 100 004	Please write in:
7. What is your HIGHEST LEVEL OF EDUCATION?	
Please choose ONE (1) box:	12. Which GENDER IDENTITY best describes you?
 Less than high school diploma 	Select ALL THAT APPLY:
 ☐ High school diploma / GED ☐ Some college 	□ Woman
☐ Associates / Technical degree	☐ Man
☐ Bachelor's degree	 □ Transgender □ Nonbinary
☐ Graduate degree or higher	☐ Prefer to describe:
□ Prefer not to say	□ I don't know
	□ Prefer not to say
8. Which RACE/ETHNICITY best describes you?	
Select ALL THAT APPLY: ☐ American Indian or Alaska Native	13. What is your SEXUAL ORIENTATION?
☐ African	Select ALL THAT APPLY:
☐ East/Southeast Asian	□ Asexual
□ South Asian	□ Bisexual□ Gay or Lesbian
☐ Black or African American	☐ Straight or Heterosexual
☐ Hispanic/Latino	☐ Prefer to describe:
 ☐ Middle Eastern or North African ☐ Native Hawaiian or Other Pacific Islander 	☐ I don't know
☐ White	□ Prefer not to say

Appendix E: Community health status assessment

The health indicators that comprised the community health status assessment were selected based on best practices, availability and local knowledge of emerging health issues. The data include rates and percentages of mortality, morbidity, incidence and prevalence (death, chronic illness and new and existing disease). Data were compiled from published secondary sources available in March 2025. The Virginia Plan for Well-Being's Virginia Community Health Improvement Data Portal collects these resources into a platform that can be used to generate data and maps of local metrics. This tool, developed by the Virginia Department of Health, was launched in September of 2022 and was invaluable to the development of this assessment.

County-level data, as well as breakdowns by population characteristics, was not consistently available, which means the amount of information within certain health topics may be limited. Specific indicators were selected and compiled to support a broad picture of health in the Inova Alexandria Hospital community and may not encompass all data available.

Figure E1 lists the data sources for Figure E2, which provides an overview of much but not all of the data considered. Please contact Inova for more information.

Appendix F: Identifying top health issues methodology

As described throughout this document and the CHNA Report, each of the three assessments identified areas of concern. Community health needs were determined to be "top health issues" if they were identified as a concern in at least two of the three assessments. An assessment scoring matrix was developed to visualize these results. Figure F1 shows this matrix for the Inova Mount Vernon Hospital community.

Figure F1. Inova Mount Vernon Hospital community assessment scoring matrix

Health Issue	Survey theme	Assessment theme	Conversations theme
Chronic conditions (stroke, heart disease, hypertension, cancer, diabetes, asthma, arthritis)	х	X	
Economic stability (income inequality, poverty, unemployment, housing costs, transportation access)	x	X	
Education and health literacy (school climate, graduation rates, college, information sources)			X
Healthcare access (insurance coverage, avoidable hospitalization, screening tests, access to medical care)	x		x
Infectious disease and immunization (infectious disease incidence, immunization rates)			
Injury and violence (accidental injury, motor vehicle collision, intentional injury, poisoning)	X	X	
Maternal, infant child and youth health (infant mortality, maternal mortality, birth rate among adolescents, prenatal care)		X	x
Mental health and substance use (depression, poor mental health days, substance use disorder, overdose, self-harm, suicide)	x	X	
Neighborhood, community and environment (social vulnerability, commuting, pollution)		X	X
Obesity, nutrition and physical activity (obesity, food insecurity, physical activity)	X		

Using this framework, the top health issues identified for the Inova Mount Vernon Hospital community are: chronic conditions; economic stability; healthcare access; injury and violence; maternal, infant, child and youth health; mental health and substance use; and neighborhood, community and environment.

Appendix G: Actions taken since the previous CHNA

This appendix discusses community health improvement actions taken by Inova since its last CHNA reports were published in 2022 and based on the subsequently developed implementation strategies. The information is included in the 2025 CHNA reports to respond to final IRC 501(r) regulations.

Members of the Community Health Division, Inova leadership, Inova Mount Vernon Hospital, Inova Ambulatory Surgery Center at Lorton, Fairfax County Health Department and community partners have been working diligently on the priority areas set forth in the 2022 CHNA Implementation Strategy.

Inova maintained the structure that was established in 2020 in the midst of the COVID-19 pandemic for administering the CHNA and implementation planning. A steering committee addresses system-wide approaches to improving CHNA-identified health needs, and the Mount Vernon Community Action Committee consisting of Inova team members and community partners identifies local needs and opportunities and develops partnerships to address them. The Steering Committee meets monthly to identify needs and opportunities throughout the system and the community. The Action Committee also meets monthly and brings together representatives from multiple Inova departments, faith-based organizations, mental health stakeholders, and community partners including but not limited to LAZERA Ministries, Northern Virginia Family Services, Prince William G.R.I.T., Smart Public Health Consulting, United Community/Community+, WISH Center and county teams including Equity, Community Services Board, Public Schools, Health Department, and Neighborhood and Community Services and community members who reside in the Mt. Vernon neighborhoods.

Inova is a partner of the county's Community Provider Strategy Team (CPST), formerly the Community Provider Coordination Team (CPCT), and participates on numerous subcommittees related to health access, food and communication. As Fairfax County completed its Community Health Assessment and began its community heath improvement planning, Inova team members participate in four workgroups designed to hone the plan going forward.

Inova in the Community

Local action committee conversations in Mount Vernon and across Northern Virginia brought to light the need for Inova to have an ongoing presence in and engagement with its local communities to continue to build trust. A tool was developed to collect information from Inova team members with interest in sharing their expertise at community events and activities. Rather than create events, Inova, guided by our Community Health Workers, works with local non-profit, faith, clinical, government and neighborhood partners to collaboratively deliver resources at events and activities designed and attended by community members. Inova team members volunteer their time and expertise at a variety of events including health fairs, health education sessions, workforce development opportunities and community celebrations. In Mt. Vernon, this included participating in events such as Mount Vernon District's annual town hall, Opportunity Neighborhood's Black History Month Celebration, Bethlehem Baptist Church's Men's Health Clinic, Gum Springs Community Center's Community Health Fair, LAZERA Ministries Teen Summer Jam and United Community's Block Party.

Inova and partners recognize that to improve healthcare access it is important to improve awareness of existing community resources. Reaching under-resourced communities with messaging about services requires tailored approaches and have included the use of Community Health Workers, trusted

messengers and popular opinion leaders, multi-lingual and multi-cultural outreach, targeted social media campaigns and interagency partnerships and cross-promotion. All the Inova Community Health clinics and programs have their own websites and educational and outreach materials. A universal one-page resource document with information about all of Inova's clinics and programs for under-resourced individuals is maintained in English and Spanish for use when attending community events and connecting with partners.

Inova team members serve as members of numerous committees across the region sharing their expertise and related work to address health access, food insecurity, workforce development and more. A few of these subcommittees include the Partnership for a Healthier Fairfax, Northern Virginia Regional Health Services Coalition, Fairfax Food Council, Healthy Families Advisory Council, Medical Care for Children Partnership Foundation, Northern Virginia Oral Health Alliance, Virginia Foundation for Healthy Youth, Virginia Community HIV Planning Group, Washington DC Regional Planning Commission on Health and HIV, Coordinated Council on Aging and Adults with Disabilities and Northern Virginia Dementia Care Consortium.

Community Health Workers

Inova is a member of the Virginia Hospital & Healthcare Association and participated in its HealthBegins cohort to use health disparity data to drive interventions in 2020. This partnership led to increased interest in the use of Community Health Workers to coordinate with patients and communities to promote wellness, improve access and address social drivers of health. In 2023, CHWs were embedded in all Inova Cares clinics, located in regions with high rates of health disparities. CHWs assist patients to stay connected to care and to address their social needs while also being present in communities to foster trust and collaboration with the healthcare system.

The value of CHWs is increasingly appreciated across the healthcare system. Inova Fairfax's Hospital Violence Intervention Program is run by CHWs with lived experience relevant to their patients' care. Inova Schar Cancer Institute's Cancer Prevention Outreach Program is also staffed with CHWs who make connections with partners and communities they serve. In 2024, a CHW began working in the Inova Mount Vernon Emergency Department to address an increased need for social drivers of health navigation for patients with upstream concerns impacting their health and leading to more emergency room visits.

In 2023, the Northern Virginia Community Health Access Forum was formed to support Northern Virginia's network of CHWs and navigators as identified as an area of focus in the CHNA. While state-wide consortia existed for CHWs, no such groups existed specifically for those working in Northern Virginia to discuss the unique barriers and opportunities they face. Inova team members facilitate the forum and create opportunities for networking and the sharing of resources between CHWs, navigators, neighborhood ambassadors and community gatekeepers across Northern Virginia. During monthly meetings, speakers present key health topics and introduce local non-profits, fostering collaboration to breaking down silos and connect people with lived experiences to resources that serve their communities.

Expansion of Community Health Clinics and Programs

Inova continued to grow its community presence through the expansion of clinics and programs into specific neighborhoods throughout Northern Virginia. Inova Community Health currently has 31 clinics and numerous outreach and engagement programs.

Inova expanded pediatric services in 2023 by co-locating Inova Cares for Children (ICC) at the Inova Cares for Families (ICF) locations in Alexandria, Fairfax, Manassas, Sterling and Herndon. These expanded services include a dedicated pediatrician and a specially trained support team. ICC offers comprehensive pediatric services for children on Medicaid or without insurance. Spaces are designed to encourage connection and foster conversations among parents, caregivers and providers.

Inova opened the first Inova Cares pediatric sick clinic in 2024, providing new levels of access to sameday care for children and families throughout Northern Virginia. Co-located with Inova Cares for Children – Falls Church, the clinic fast-tracks existing patients who have fevers, ear infections, sore throats or other common ailments to get the care they need to return to daycare or school as soon as possible. Parents and caregivers can bring children directly to the clinic without an appointment to receive immediate care, avoiding a trip to the emergency room.

ICF and the Inova Juniper Program (IJP) opened their Mount Vernon location in October of 2023 as a result of Inova's Mount Vernon Community Health Needs Assessment identifying healthcare access as a top unmet need in the Mount Vernon area. These clinics create medical homes in the community to improve access, address healthcare needs and foster long-term wellbeing.

Additionally, two ICF clinics expanded their sites in 2025 to meet the significant growth in need in the communities they serve. The Herndon location moved to an expanded site that ensures patient access is aligned with community needs as identified in prior CHNAs. By co-locating Inova Cares for Women, Children, and Families and Inova Juniper Program, patients can receive care for the whole family at a single location. The Annandale site saw significant patient growth over the last decade and anticipates serving more patients with the new expansion.

Inova Cares clinics have partnered with Inova Schar Heart and Vascular to embed cardiologists who can provide onsite screening and treatment with the goal of reducing the risk of high blood pressure, diabetes, heart disease and stroke. This service launched at the Sterling location which serves primarily eastern Loudoun and western Fairfax communities and is expected to expand next to ICF - Mount Vernon. These two locations were selected based on data regarding cardiac risks and outcomes in the communities they serve.

All Inova facilities provide financial assistance in accordance with Inova policies which ensure access to medically necessary care for all individuals. Charity care is defined as free or discounted healthcare services provided to those who cannot afford to pay. Inova's Financial Assistance Policy provides 12 months of coverage to anyone living in Virginia at or below 400% of the federal poverty level. Many of these individuals receive their primary care at the Inova Cares clinics where wrap-around services, including community health workers, can help them with obtaining the resources they need to thrive.

Community Health Partner Support

Every year Inova provides Community Health Opportunities grants to non-profit organizations in Northern Virginia providing services aligned with the CHNA. Applicants are asked to provide a brief overview of their organization's connection to the communities they serve and a description of the services they would provide if awarded. In addition to these awards, numerous local nonprofits are collocated with Inova services and receive additional support. Between 2023 and 2025 approximately \$3.9 million in grants and support were provided to over 60 partners.

Recipients that support the Inova Mount Vernon Hospital Community include:

2023 recipients: Act for Alexandria, The Growth and Healing HUB, Housing Alexandria, LAZERA Ministries, Northern Virginia Dental Clinic, SafeSpot Children's Advocacy Center, The Shepherd's Center of Fairfax-Burke and United Community.

2024 recipients: Afghan-American Women's Association, Alexandria Seaport Foundation, Alexandria Soccer Association, True Ground Housing Partners, Carpenter's Shelter, Girls on the Run NOVA, Just Neighbors, Learn & Live Wholestic Health Services, Kitchen of Purpose, Lorton Community Action Center, Medical Care for Children Partnership Foundation, Planning for Senior Life, Prevention of Blindness Society, Centers for Opportunity, The Center for Alexandria's Children, The Chris Atwood Foundation, The Fenwick Foundation, Wesley Housing and Women Giving Back.

2025 recipients: Adaptive Fitness Legion, Capital Area Food Bank, Cornerstone Craftsman, Friends of Guest House, Insight Memory Care Center, Korean Community Service Center of Greater Washington, LAZERA Ministries, Marie Maxey Foundation, Move2Learn, NAMI Northern Virginia, Nueva Vida, Inc., Real Food for Kids, STEM for Her, The Spitfire Club and United Community.

Social Drivers of Health Screening

In 2021, Inova adopted an SDOH screening tool made up of validated questions assessing need in a wide array of social drivers. The project brought together teams representing all aspects of the Inova workforce to determine how the tool and resulting patient responses should be presented, who it should be available to and what was necessary to begin socializing its use. Inova socialized the tool in all inpatient and outpatient settings and utilizes tracking dashboards to help departments visualize their successes and opportunities in collecting this information. Information available on Inova's intranet helped teams develop approaches to data collection via a variety of mechanisms, including directly from patients and via Inova's online MyChart patient portal.

In addition to helping with the support of individual patients, robust SDOH data can now be used to help inform clinical and community care. Using these data, approaches are created to address top SDOH needs including intimate partner violence, transportation and food insecurity. These workflows can be tailored to the needs of individuals being served in a variety of Inova settings. Data also help predict patient needs, barriers and outcomes, allowing for better insights when developing interventions, designing resources or establishing outreach programs. SDOH screening and interventions are now built into care models, ensuring a whole-person approach to care.

In April 2023, Inova rolled out the Unite Us/Unite Virginia platform for active referrals to social services and non-profit partners. Over 7,000 team members across the Inova system have the ability to make referrals to community partners from the electronic medical record. Several of Inova's community health clinics and programs also accept referrals from the community through the platform. Inova is working closely with community partners to assist in adoption of the platform throughout the non-profit landscape, creating a robust referral network. This critical collaboration provides a closed loop solution for Inova team members using the SDOH screening tool, providing easy access to refer patients to multiple community resources that can address social drivers of health.

The network has grown since Inova began using the platform, in part due to education and partnership Inova sought with non-profits and funders. Recipients of Inova's grant support are encouraged and

supported to join the network, opening referrals both to and from Inova and other partners.

To support patients experiencing food insecurity, Inova maintains emergency food pantries in more than ten locations through partnerships with regional food banks and donors. The pantries are in locations, like the Inova Cares clinics, that serve patients experiencing food insecurity to address immediate needs. In 2024, Inova opened its first inpatient food pantry for food insecure patients at Inova Alexandria Hospital. Upon receiving emergency food from these pantries, patients are referred through Unite Us to local food partners and pantries to ensure continuous access to food.

Creating a Community Based Workforce

Inova's community-based workforce development initiative, Dream B!G, aims to ensure the healthcare workforce reflects and represents the communities Inova has the privilege to serve. The program was created in 2021 and gives under-invited youth an up-close look at a variety of healthcare careers and roles. Inova team members from many backgrounds and professions – known as the Dream Team – created short videos highlighting their career journeys. Team members visit Title 1 middle and high schools in Northern Virginia to show the videos, share their work-life experiences and invite students to visit the healthcare setting. The goal is to inspire young people to visualize their own healthcare career success stories.

The Inova Community Health team and Inova Talent Acquisition's Workforce Development team partner to develop resources for youth and adults who aspire to a healthcare career. Information shared at Dream B!G workforce activities includes outlines of positions that do not require post-secondary education, career ladder opportunities and tuition assistance at Inova. These materials can help students determine next steps after high school, as well as offer adults opportunities to join the healthcare field. This approach provides community members with career opportunities and economic stability while providing Inova with a responsive and representative workforce.

Inova organized a series of job pairing events beginning in 2024 for community members eager to explore healthcare career opportunities. In collaboration with Crossroads Jobs, the WISH Center, Bridges to Independence and other community partners, Inova brought personalized career coaching and development directly to partner facilities, providing invaluable and convenient support to job seekers. These efforts aimed to empower individuals with the tools and knowledge they need to successfully navigate the healthcare job market, fostering growth and opportunity for all participants.

In October 2024, Inova convened regional workforce partners to initiate a coordinated effort to improve health and life sciences career awareness and education. Together with the Claude Moore Charitable Foundation, the Northern Virginia Healthcare Workforce Collaborative will facilitate and communicate pathways designed to build a workforce to meet the ongoing healthcare needs of Northern Virginia and create economic stability for its communities. The collaboration brings together public schools, higher education, healthcare employers and more to work collectively to enhance Northern Virginia's healthcare and health sciences talent pipeline.

In 2025, Inova Dream B!G hosted 2 career development seminars for adults. These programs aimed to engage and inform the community regarding several healthcare career pathways. Each day included sessions on interview skills, resume writing, and financial literacy, as well as face-to-face interaction with a wide range of healthcare professionals from different roles.

Inova Community Health has an established a partnership with the Fairfax County Health Department's Public Health Youth Ambassador Program (PHYAP) to provide community-based training and experiential opportunities for Fairfax County Public High School students with low-income backgrounds. Community Health Workers and team members from Inova Cares for Families provided experiential experiences for students to supplement computer-based learning modules. Graduates of the Public Health Youth Ambassador Program receive a certificate of completion from Morehouse School of Medicine's High School Community Health Worker Program, a scholarship, resources they need to participate in the program.

Dream B!G has partnered with Fairfax County Public Schools to provide hands-on activities and tours of Inova Mount Vernon Hospital. High school students visited with team members in various departments such as physical therapy and neuroscience, experienced virtual reality-based training with the Inova Center for Advanced Medical Simulation and observed the respiratory system with pig lungs. Their visits included small-group roundtable discussions with team members from across the hospital to discuss educational backgrounds and career journeys. Team members provided ad-hoc mentoring about their day-to-day operations and advice for students as they plan their next steps.

In 2024, prior Dream B!G students were offered the opportunity to join a mentorship cohort focused on career pathways to becoming physicians, nurses, pharmacists and technicians. Students were grouped into pods based on their interests and met with Inova team members in those careers. In addition to two in-person events, Inova team members connected with the students via email, phone and meetups throughout the year.

In 2025, Dream B!G expanded its reach and hosted hands-on activities at various school sites throughout Northern Virginia to allow for more students to participate. Inova's cardiology, neuroscience, and pediatric multispecialty departments helped pilot the approach. These nimble teams were able to bring hands on experiences and open conversations to high school students in the comfort of their classrooms.

Healthcare Worker Education

Since 2019, Inova has hosted the annual Healthcare Disparities Conference, which provides attendees with unique perspectives on how to identify and reduce disparities in patient outcomes and experience.

In October 2023, the Fifth Annual Healthcare Disparities Conference championed "A Call for Connection: Cultural Humility and Allyship." Keynote speaker Ijeoma Nnodim Opara, MD, FAAP, FAIM, of Wayne State University, shared a rousing call for cultural humility and health justice. The day included vignettes and storytelling regarding creating brave spaces and addressing healthcare barriers by reframing the patient experience through the lens of SDOH.

In October 2024, Inova and partners presented the Sixth Annual Healthcare Disparities Conference titled: "A Call for Commitment." This event reached more than 425 healthcare workers and community partners across Northern Virginia and throughout the United States with storytelling framed around identifying disparities and implementing strategies to address them while staying motivated to improve the healthcare experience for patients, families and healthcare teams.

The seventh annual conference in September 2025 was titled: "A Call for Innovation." Through real-world examples and local strategies, speakers will showcase the power of data-driven insights and intentional use of artificial intelligence to reduce disparities and deliver care that is responsive to the

needs of patients, families and care teams.

The Community Health Division serves as a training site for medical residents, involving placement at ICW, ICC, ICF and Lions Eye Clinic. The team plays a central role in shaping the next generation of healthcare providers through hands-on clinical education and mentorship. Additionally, residents receive lectures on community health programs and local resources, ensuring they are well-equipped to support patients both inside and outside the clinics.
